1973-1991 Chevy / GM Blazers and Suburbans

Shackle Flip Kit

Need an inexpensive way to avoid using rear lift blocks? Superlift now offers a shackle-flip kit for '73-'87 Chevy trucks and '73-'91 Blazers and Suburbans. This kit "flips" the factory tension shackle to a more conventional compression shackle and gains 4" of lift. Our shackle flip kit allows the use of the factory springs with a 4" lift or the use of a shorter block (or shorter replacement springs) with taller systems. It also improves pinion angle and reduces or eliminates the need for corrective degree shims. Eliminating or reducing the height of lift blocks helps reduce axle wrap and allows the use of a flatter spring for improved ride quality. Works with 52" and 56" rear springs on 1/2, 3/4, and 1-ton trucks.
