

**Now Shipping 4" Lift Systems for:
2008 Jeep Grand Cherokee (WK) and Commander (XK) 2WD and 4WD**

Superlift has been shipping lift systems for the 2005-07 models for some time. The non-electronic lift system components are the same for the entire 2005-08 year spread. The difference is that the 2008 model requires a different Electronic Geometry Recalibration (EGR) Module; we now have EGR modules for the 2008 model (#5155) as well as the 2005-07 models (#5154).

Please make this notation in your catalog #115, on pages 53-54 and 194-196: 2008 models require Part# 5155 EGR Module. Again, the non-electrical lift system components are the same throughout the entire 2005-08 range; the only difference is the EGR module. There is a new Master Pack (K-number) for the 2008 model.

Part No. 5155

Electronic Geometry Recalibration (EGR) Module - The Grand Cherokee and Commander were some of the first vehicles to include Jeep's Electronic Stability Program (ESP). Creating a true performance lift system with ESP compatibility has been a stumbling block for most suspension manufacturers. Superlift relies on our exclusive Electronic Geometry Recalibration (EGR) module, produced by AEV, to provide the properly calibrated steering input signal to the factory ESP unit. The EGR module also allows for speedometer recalibration, desired when taller height tires and / or different axle gear ratios are installed. The module simply plugs into an existing wiring harness located beneath the dash. Use only with the Superlift Grand Cherokee and Commander 4" lift systems.

2008 Jeep Commander (XK) and Grand Cherokee (WK)
